PROFESSIONAL SUMMARY

Data analyst with a UNSW Computer Science degree and hands-on experience turning operational data into dashboards and automated reporting across retail and data-services environments. Skilled in SQL, Python and Power BI to extract, clean, model and visualise data for sales, inventory and operations stakeholders. Strong academic grounding in databases and data processing, including a Distinction and the top final-exam mark in Database Systems at UNSW. Seeking a Data Analyst or Junior Data Engineer role; open to relocation across Australia.

KEY ACHIEVEMENTS

- Automated the weekly sales reporting cycle at Lagardere AWPL using Microsoft Fabric, Power BI and Power Automate, replacing a fully manual process and distributing reports to store managers across the Asia-Pacific travel-retail network with no ongoing manual effort.
- Delivered Power BI dashboards across sales, engagement and operational data at The Data and AI Institute, giving multiple teams clearer performance visibility and supporting a 20% lift in channel engagement.
- Built ten end-to-end analytics and data-engineering projects across Python, SQL, Power BI, Tableau, Excel and PySpark, spanning machine-learning forecasting, advanced SQL and statistical testing, dashboarding and big-data processing.

TECHNICAL SKILLS

Programming & Query Languages: Python (pandas, psycopg2), SQL (PostgreSQL, PL/pgSQL, window functions, recursive CTEs), JavaScript

BI & Visualisation: Power BI (DAX), Tableau, Looker, Looker Studio, Excel (pivot tables, dashboard design), Google Sheets

Data Handling & Processing: Data extraction, cleaning and modelling; star-schema and relational modelling; RFM segmentation; cohort retention analysis; PySpark (Spark SQL, DataFrames)

Databases: PostgreSQL (schema design, indexing, views, stored procedures)

Automation & Cloud: Power Automate, Microsoft Fabric, Google Cloud Platform, shell scripting

Statistics & Analysis: Hypothesis testing, correlation analysis, descriptive analytics

Tools: Git & GitHub, Buffer, Pipedrive, LearnWorlds, AI-assisted development (Claude, Copilot)

PROFESSIONAL EXPERIENCE

Operations Data Analyst

March 2026 – Present

The Data and AI Institute — Sydney, NSW

Education provider delivering data and AI training to students across multiple course cohorts.

- Designed a daily social-media performance dashboard in Power BI (slicers, rolling averages, KPI cards, dynamic visuals) tracking 15+ KPIs across Meta, Instagram and LinkedIn from Buffer and Excel data, supporting a 20% lift in engagement across channels.
- Built a student-survey analytics pipeline in LearnWorlds and Looker, using Python (pandas) to de-duplicate entries, join survey responses to enrolment data and handle missing values, then SQL to analyse 5,000+ learners — surfacing a 12% course drop-off point.
- Reduced manual reporting time by an estimated 30% by building Python automation workflows on Google Cloud Platform and Google Sheets to feed dashboards and pipelines.
- Consolidated finance and unit-economics reporting across eight cohorts by combining Pipedrive and GCP data into Excel and Google Sheets models and Power BI dashboards.

Analytics Engineer

December 2025 – March 2026

Lagardere AWPL — Sydney, NSW

The Pacific region's largest travel-retail operator, running 150+ duty-free, dining and specialty stores across 26 airports in Australia, New Zealand and Noumea.

- Automated the weekly store sales report using Microsoft Fabric, Power BI and Power Automate, replacing a manual process with an automatic build-and-distribute workflow to store managers; the workflow became a reusable template for further reporting.
- Built Power BI dashboards for multiple teams and managers, giving store and category stakeholders clearer visibility of performance across the retail network.
- Extracted and prepared data across sales, inventory and internal operations, reducing the analytical load on the permanent analysts.
- Delivered ad hoc data extracts and reports across the business, covering operational, sales and inventory requests.

Junior Analytics Engineer

October 2024 – December 2025

BayShore Communication — Tampa, FL, USA (Remote)

Tampa-based growth-marketing and software agency providing end-to-end digital services — web and app development, SEO/SEM, advertising, content and PR — to multiple client accounts.

- Standardised reporting across several client accounts by building and maintaining dbt models that transformed raw marketing and CRM data into analytics marts.
- Improved data reliability by writing dbt tests to catch broken tracking and duplicate events before they reached client dashboards.
- Maintained pipeline reliability across client accounts by orchestrating dbt runs with Python-based Airflow DAGs.
- Broadened scope from a single client account to several as the data team's client base grew.
- Accelerated SQL debugging and documentation by integrating AI-assisted tools (Claude, Copilot) into the daily workflow.

Data Analyst Intern

August 2024 – October 2024

BayShore Communication — Tampa, FL, USA (Remote)

- Built and maintained weekly performance dashboards in Looker Studio across multiple client accounts.
- Reduced tracking discrepancies by assisting with GA4 and Google Tag Manager QA.
- Improved reporting accuracy by querying and cleaning campaign and CRM data with SQL.

Cloud Computing Intern

February 2024 – April 2024

Swop — Charlotte, NC, USA (Remote)

Early-stage technology startup building an NFC and blockchain platform for sharing data and transacting through microsites.

- Supported cloud infrastructure and monitoring tasks during a remote internship.

KEY PROJECTS

Retail Intelligence Platform | Python, PostgreSQL, LightGBM, XGBoost, FastAPI, Docker

- Designed a PostgreSQL star schema for a simulated 8-store, 4-city, 40-SKU retail chain (two years of daily transactions) with quarterly range partitioning, composite covering indexes and five analytical views — RFM segmentation, rolling revenue, month-on-month growth, repeat-purchase rate and city-level rankings.
- Wrote stored procedures for daily KPI refresh and on-demand inventory uplift-profit calculation, backed by an advanced SQL layer using multi-step cohort CTEs, stockout detection and window functions for rolling revenue and growth metrics.
- Validated a promotional campaign with Welch's t-test (+22.9% revenue lift, $p < 0.001$) and confirmed cross-city revenue variance with one-way ANOVA ($F = 643$); engineered lag, rolling and weather-interaction features to train LightGBM and XGBoost models that beat a naive baseline by 38% MAE (XGBoost MAPE 21.3%).
- Served point forecasts with empirical prediction intervals through a FastAPI endpoint, generating profit-linked inventory recommendations — for example, a 15% increase in Electronics stock in Sydney ahead of Christmas, projected to add AUD 576K in incremental profit over 30 days.

PostgreSQL E-Commerce Analytics | PostgreSQL, PL/pgSQL, Advanced SQL, Schema Design

- Designed a normalised PostgreSQL schema and reproducible synthetic dataset (5,000 customers, 14,200 orders, 57,000 order lines).
- Wrote ten analyses covering window functions, a recursive CTE for category-hierarchy roll-ups, RFM customer segmentation and cohort retention modelling, backing a materialised view with a PL/pgSQL function.

- Deployed a fully client-side browser dashboard (PostgreSQL compiled to WebAssembly) with a live SQL editor and zero backend.
- **Kmart Sales Performance Dashboard** / *Excel* — Cleaned and structured raw retail transaction data into an interactive dashboard with KPI cards, slicers and a geographic sales map, surfacing insights including a 79/21 store-vs-online split and top-performing states, suburbs and managers.
- **Woolworths Dark-Store Shelf Planner** / *Excel, JavaScript* — Analysed product affinity using Pearson correlation and clustering, then built a drag-and-drop tool for planning warehouse aisle layouts.
- **Netflix Viewing Analytics** / *Excel, JavaScript* — Built a correlation-based recommendation engine over 2,000 subscribers and 9 titles using pivot tables and Pearson correlation, delivered as a self-contained web app that ranks recommendations by match score with an interactive correlation heatmap.
- **Everyday Rewards Loyalty Dashboard** / *Power BI* — Built a multi-page report analysing loyalty activity across 10,000 customers and 100,000+ transactions with drill-through pages, using the Key Influencers visual to identify drivers of high vs low points redemption.
- **Blackmores HR Analytics Dashboard** / *Tableau* — Designed a dashboard analysing attrition across 1,470 employees with calculated fields for attrition rate, active headcount and age binning, identifying attrition drivers by department, education field and age bracket.
- **Trending Topics Detection (Big Data)** / *Python, PySpark, Spark SQL* — Processed a 1M+ ABC News headline dataset into a structured format and built a PySpark pipeline computing yearly term and document frequencies and TF-IDF weights to surface the top trending terms per year.
- **Search Engine (Information Retrieval)** / *Python* — Built an inverted positional index over 1,000 Reuters documents with normalisation for case, stemming and numeric formats, multi-term proximity ranking, query normalisation and edit-distance spelling correction.
- **Movie Database Analytics** / *Python, PostgreSQL* — Built a Python and PostgreSQL system to extract structured information from a large IMDb-style database, with scripts for films by writer, release countries, top genres by year and cast and crew lookups using SQL joins, aggregation and edge-case handling.

EDUCATION

Bachelor of Computer Science

September 2022 – December 2025

UNSW Sydney — Sydney, NSW

- Relevant coursework: Programming Fundamentals, Database Systems, Software Construction, Information Retrieval and Web Search, Big Data Management.
- Database Systems: Distinction (82) — highest mark in the class in the final examination.

CERTIFICATIONS

Innovator Pro — UNSW Employability

September 2025 – December 2025

Professional Development Program — UNSW Employability

September 2025 – December 2025

AWARDS

UNSW International Student Award — UNSW Sydney

September 2022

Scholarship recognising academic excellence as an international student.

VOLUNTEERING

Fundraiser — Starlight Children's Foundation

February 2024 – March 2024

Raised funds and engaged the public to support programs improving the wellbeing of seriously ill children and their families.

Founding Member — Bangladesh Red Crescent Society

September 2018 – May 2020

Co-founded the first Bangladesh Red Crescent team at high school and coordinated community resources to support the fundamental needs of underprivileged individuals.
